Your first rule is stupid.

1. Some counties border multiple jurisdictions; how is that going to work if you have 3 counties in the same area? and what if you need more for your own residents?
2. Some counties are very long and narrow like Arapahoe. How many potential voters are going to be going to each spot from the other county?
3. The counties already have data about how many go to each vote spot and they only have a handful of vote spots for the whole county. What happens if they now give half to another county? who knows how many would use and in certain areas where there are no vote spots from one county; people could actually hog the services of the other county.
4. What happens if you increase the work load for the other county? who is paying for it?
5. Its one thing if its a rural county and its not going to add to the problems but in the large counties; we can see alot of problems.

Your second; is a violation of article 7; section 8 of the co constitution.

This is the one that guarantees a secret ballot and does not let you mark how people voted. If you are going to mark which party they vote for; that is the same as marking who we voted for in alot of cases

We followed 305 as we work for one of the senators and we didnt like the outcome at all. You are going to disenfranchise U voters of which we are one. This further helps the parties as u voters are the largest single block of voters; we swing most elections and this is very valuable information to the parties; which way we vote / who they need to target.

We can see you getting sued if the Gov does not veto this bill. This is also going to cost a mint having to mail 2 ballots to each U voter.

Probably have more suggestions later on.

Thank you.

JM Fay
